Lab Programs

COURSE CODE: CSA1418 **COURSE NAME: Compiler Design**

Experiment 2: Identify Whether a Given Line Is a Comment

Aim:

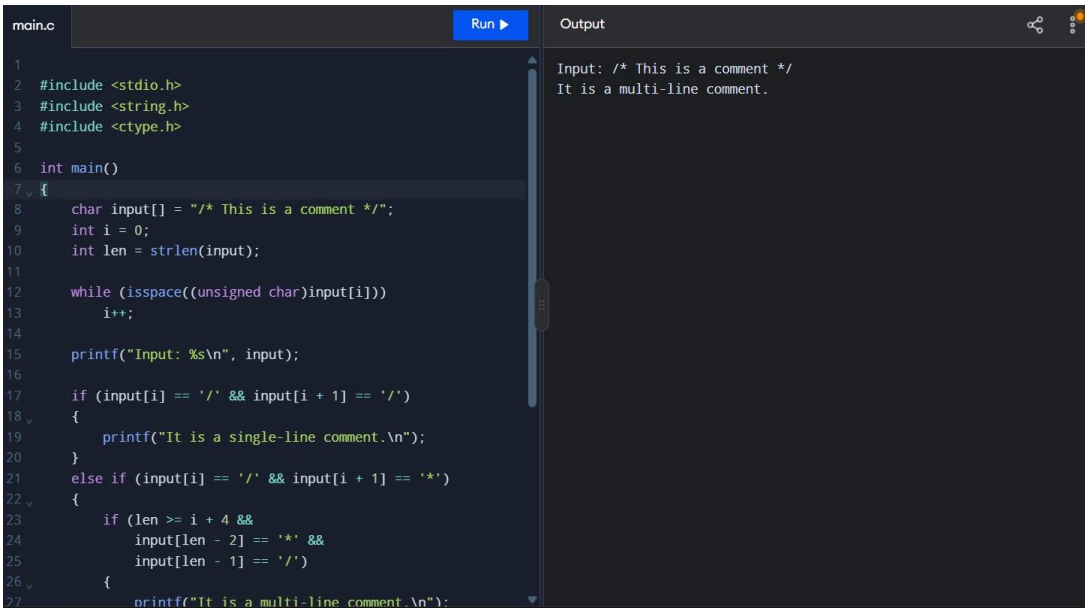

To develop a lexical analyzer in C to identify whether a given line is a single-line or multi-line comment.

Software Used: C Compiler (Programiz Online Compiler).

Algorithm / Procedure:

- Open the online C compiler.
- Write the C program to identify comments.
- Initialize the input line in the program.
- Check whether the input begins with `//` for a single-line comment.
- Check whether the input begins with `/*` and ends with `*/` for a multi-line comment.
- Display whether the given input is a valid comment or not.
- Compile and execute the program.
- Verify the output.

Execution Screenshot:

Result:

Thus, the program was implemented and executed successfully to identify single-line and multi-line comments in C.
