Lab Programs

COURSE CODE: CSA1418 **COURSE NAME: Compiler Design**

Experiment 1: Lexical Analyzer in C

Aim:

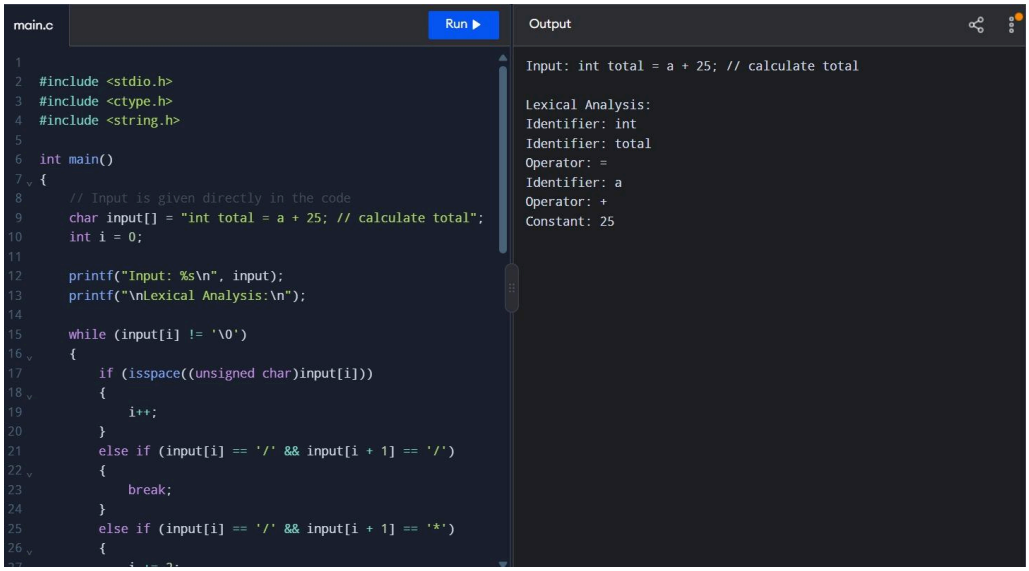

To develop a lexical analyzer in C to identify identifiers, constants, and operators while ignoring redundant spaces, tabs, newlines, and comments.

Software Used: C Compiler (Programiz Online Compiler).

Algorithm / Procedure:

- Open the online C compiler.
- Write the C program for lexical analysis.
- Initialize the input C statement in the program.
- Scan the input character by character.
- Ignore redundant spaces, tabs, newlines, and comments.
- Identify and display identifiers, constants, and operators separately.
- Compile and execute the program.
- Verify the output.

Execution Screenshot:

Result:

Thus, the lexical analyzer was implemented and executed successfully in C to identify identifiers, constants, and operators while ignoring redundant spaces, tabs, newlines, and comments.
