Lab Programs

COURSE CODE: CSA1418 **COURSE NAME: Compiler Design**

Experiment 6: Lexical Analyzer to Validate Identifiers Using FLEX

Aim:

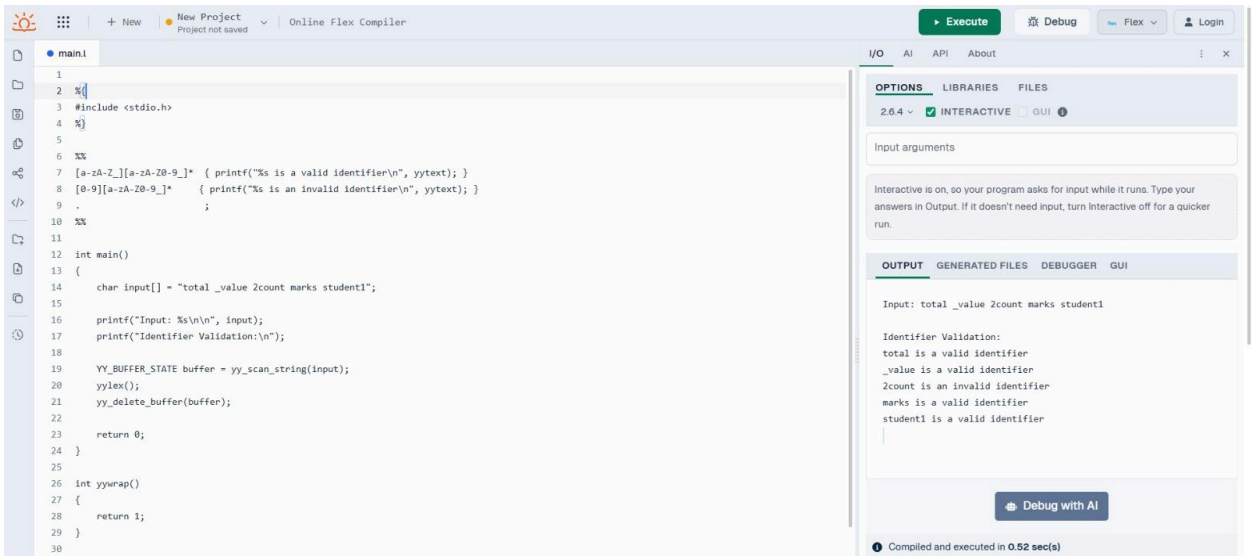

To write a FLEX program to check whether a given identifier is valid or invalid.

Software Used: JDoodle Online FLEX Compiler.

Algorithm / Procedure:

- Open the JDoodle Online FLEX Compiler.
- Write the FLEX program to validate identifiers.
- Initialize the sample input containing valid and invalid identifiers.
- Check whether each identifier begins with a letter or underscore.
- Verify that the remaining characters contain only letters, digits, or underscores.
- Display whether each identifier is valid or invalid.
- Compile and execute the program.
- Verify the output.

Execution Screenshot:

Result:

Thus, the FLEX program was implemented and executed successfully to identify valid and invalid identifiers.
