COURSE CODE: CSA1418 **COURSE NAME: Compiler Design**

Experiment 7: C Program to Find FIRST() for a Given Grammar

Aim:

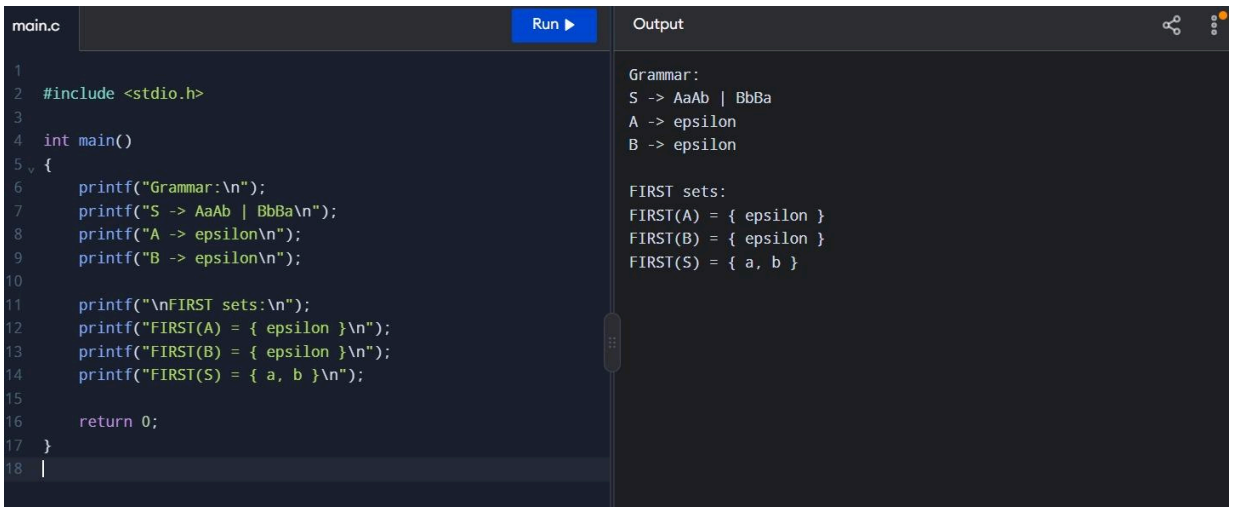

To write a C program to find the FIRST sets for the given grammar.

Software Used: Programiz Online C Compiler.

Algorithm / Procedure:

- Open the Programiz Online C Compiler.
- Write the C program to display the FIRST sets for the given grammar.
- Consider the grammar:
  - S → AaAb | BbBa
  - A → ε
  - B → ε
- Determine the FIRST sets of non-terminals A and B.
- Determine the FIRST set of S using the given productions.
- Display the calculated FIRST sets.
- Compile and execute the program.
- Verify the output.

Execution Screenshot:

Result:

Thus, the C program was implemented and executed successfully to display the FIRST sets for the given grammar.
